**RE: Orange County Advanced Power Station**

Dear Entergy Texas customer,

We recently received approval to begin construction on the Orange County Advanced Power Station, a new power generating facility being built at the Sabine Plant near your neighborhood. This is part of Entergy's plan to meet the growing demand across Southeast Texas, modernize our generation fleet and continue providing clean, affordable and reliable energy to our customers.

The initial phase of the construction project will be site preparation, which will begin within the next two weeks and continue until the end of July. This will result in increased truck traffic, predominately on weekdays and possibly Saturdays. Due to the increase in traffic, residents may need to adjust their daily commute times and routes. Traffic will be monitored, and a deputy will be assigned to assist with traffic control as necessary.

Entergy values you as a customer and appreciates your understanding as work begins on this exciting project in your area. Visit [www.entergy.com/entergypowerstexas](http://www.entergy.com/entergypowerstexas) for additional information.

Sincerely,

*Keith Pollock*
