

Powering a smarter future.

Entergy Mississippi is committed to continuous improvement of our systems and services, and utilizing new technology to build a smarter grid.

The first step toward modernizing and building a smarter energy future for our customers is transitioning to advanced metering infrastructure – or AMI – for homes and businesses we serve. It's a system that allows two-way communication between us and our customers.

With AMI, customers will get more tools and better information to help understand and manage their energy use more effectively, which can lead to lower bills and potential energy reduction. We'll be able to identify outages more accurately, so crews can make repairs and restore electricity faster. Having near real-time information on energy usage allows us to better answer billing and service questions more quickly.

FASTER OUTAGE RESTORATION TIMES.

SMARTER INFRASTRUCTURE.

MORE DETAILED USAGE INFORMATION FOR CUSTOMERS.

FASTER COMMUNICATION FOR IMPROVED CUSTOMER SERVICE.
