

Committed to Mississippi's Energy Future

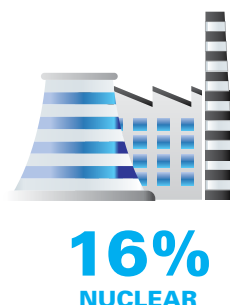

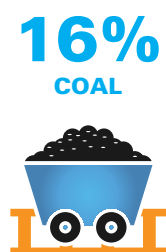

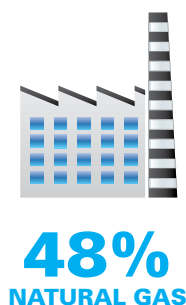

Maintaining a diverse energy portfolio is critically important for the short- and long-term well-being of our customers. Entergy Mississippi currently utilizes natural gas, coal and nuclear energy sources. This level of diversity not only keeps prices as low as possible, but it helps to control emission output.

We're also looking to the future with solar energy. We currently operate the state's first utility-owned solar project. Three Entergy solar sites throughout the state provide 1500kw of energy, while providing data and insight into how we can better incorporate solar into our power grid on a greater scale.

Entergy Mississippi is committed to a diverse energy portfolio because we're committed to doing right by our customers.
