

# Solar power for a bright future.

## Entergy Mississippi solar project.

Entergy Mississippi operates the state's first utility-owned solar project as part of its commitment to a diverse energy portfolio. Three 500 kW solar stations, located in DeSoto, Hinds and Lincoln counties, track everything from how much CO<sub>2</sub> is offset to how many houses could be powered for a year from the energy the stations produced.

These solar projects provide crucial data in determining the economics and feasibility of solar generation in Mississippi. Entergy Mississippi is committed to delivering the cleanest, most affordable energy to its customers. And we are in the process of building a 100-megawatt facility in Sunflower County, which will be the largest utility-owned solar farm in the state, with anticipated completion by the end of 2021.
